JOSH FULLMER

Frontend Developer focused on user-driven outcomes, delightful user interactions, and accessibility. Motivated learner, always seeking knowledge and growth, never content or complacent. High performer without sacrificing quality. Loves reading scifi/fantasy, playing board games, and writing.

Work Experience

Senior Software Engineer, Collectors

Santa Ana, CA • May 2022 – present

- Wrote well-tested, comprehensible, and organized code in React and Typescript in an Next.js app that is used daily by tens of thousands of users.
- Built highly composable and reusable components in component library to support usage across entire frontend framework.
- Partnered with product managers and leadership to prioritize tech debt to make apps easier to develop and extend.
- Thoroughly reviewed hundreds of pull requests, and in doing so caught bugs, encouraged best practices, and coached other devs on quality development.
- Brought a user-focused mindset to all stages of the development process.

Software Engineer III, Keap

Chandler, AZ • April 2019 – May 2022

- Wrote well-tested, comprehensible, and organized code in a Vue frontend app and Typescript in an Express backend-for-frontend app that is used daily by tens of thousands of users.
- Integrated with third party platforms, like Twilio, to create a seamless, white-label user experience.

Data Engineer & Project Manager, Keap

Chandler, AZ • June 2015 – April 2019

- Led a team of data specialists to perform ETLs for users migrating to our platform.
- Wrote scripts in Python, heavily using Numpy and Pandas, and apps in React and Django to support data specialists in performing ETLs.
- Communicated directly with users to coordinate each ETL project, understanding user needs, and managing expectations.
- Awarded employee of the month for exceptional work.
